Recent Bachelor of Technology in Information Technology graduate with a strong foundation in full-stack development, AI, machine learning, and cybersecurity. Completed coursework and projects in advanced data structures, deep learning, Gen AI, and CI/CD pipelines. Eager to leverage innovative abilities to develop scalable software solutions and enhance system reliability in a dynamic technology environment.

🏢 EXPERIENCE

Fullstack Development Engineer Intern at Produktiv.ai

Jan 2025 – Jun 2025 | Goa, India

- Developed and maintained scalable microservices and third-party connectors for Google Drive, Confluence, Slack, and Microsoft Teams using Go and Python, integrating robust session management with auto-expiry and refresh token flows, resulting in 30% improved system reliability.
- Led API documentation and testing initiatives by implementing Swagger-based API specs and comprehensive unit tests covering 95% of codebase, enforcing static code analysis and best practices for code hygiene, security, and GenAI model integration testing, reducing production bugs by 40%.
- Resolved critical production issues including request throttling errors, contributed to vulnerability assessments, and authored internal documentation on Jira and Confluence following Agile Scrum methodologies, incorporating deep learning-based anomaly detection techniques that improved anomaly detection accuracy by 25%.

Summer Research Intern at Indian Institute of Technology Guwahati (IITG)

May 2024 – Jul 2024 | Assam, India

- Built a dynamic web application in Django to support real-time data updates for academic research workflows, improving accessibility and usability of research tools and enabling integration with deep learning data pipelines, increasing data processing speed by 35%.
- Designed and deployed CI/CD pipelines using Docker, GitHub Actions, Nginx, and Gunicorn to automate builds and streamline deployment, enhancing reproducibility and scalability for AI-driven research projects, reducing deployment time by 50%.

Software Development Engineer Intern at Climbox Entertainment Pvt. Ltd.

Jun 2023 – Jul 2023 | New Delhi, India

- Developed and maintained interactive frontend components for live client projects using HTML, CSS, and JavaScript, improving responsiveness and UI consistency with scalable design principles, increasing user engagement by 20%.
- Supported API integration by testing endpoints in Postman and contributing to Swagger documentation, ensuring accurate and secure API specs for cross-team development and facilitating integration with AI/ML services, reducing integration errors by 30%.
- New Responsibility

🎓 EDUCATION

Bachelor of Technology in Information Technology at JK Lakshmipat University

Jan 2025 | Jaipur, Rajasthan

CGPA: 6.9; Relevant Coursework: Advanced Data Structure, AI, ML Deep Learning, Gen AI, LLM

🔗 CERTIFICATIONS

Red Hat Certified System Administrator (RHCSA) at RedHat

EC-Council Certified Secure Computer User v2 at EC-Council

CompTIA IT Fundamentals Certification at CompTIA

★ SKILLS

Programming Languages: Go, Python, Django, Shell Scripting, React

Data Science Tools: Pandas, TensorFlow, Matplotlib, Langchain, RAG, Transformers, GenAI

DevOps Tools: Docker, CI/CD, GitHub Actions, Nginx

Others: Jira, Postman, MySQL, Selenium, Unit testing, Static Analysis & Vulnerability Checks, OCR, CNN, RNN, Web Research

<> PROJECTS

National Judicial Data Grid Automation

Aug 2024 – Aug 2025

- Automated data scraping and analysis from NJDG and Supreme Court NJDG using Python and Selenium. Integrated CI/CD pipelines for deployment, extracting key insights to support informed decision-making.

Offence Lab

Apr 2024 – May 2024

- Developed a configurable cybersecurity lab environment using Docker, featuring services like DVWA and Caddy. Enabled hands-on learning for cyberattack simulations and security testing.

SecurePass Validator

Jan 2022 – Mar 2022

- Developed a command-line utility to generate secure passwords and check for breaches using the HaveIBeenPwned API without exposing the original password.
